CONTENTS

PEACOCK, J. D.
Late Devensian marine deposits (Errol Clay Formation) at the Gallowflat Claypit, eastern Scotland: new evidence for the timing of ice recession in the Tay Estuary .................................................. 1

THEMATIC SET: Scottish graptolite biostratigraphy

STONE, P., RIGBY, S. & FLOYD, J. D.
Advances in Scottish graptolite biostratigraphy: an introduction .................. 11

WILLIAMS, M., ZALASIEWICZ, J., RUSHTON, A. W. A., LOYDELL, D. K. & BARNES, R. P.
A new, stratigraphically significant Torquigraptus species (Silurian graptolite) from the Southern Uplands Terrane .............................. 17

STONE, P. & RUSHTON, A. W. A.
A Late Arenig (early Yapeenian) graptolite fauna and the coeval tectonic development of the Ballantrae Complex ophiolite, SW Scotland .......... 29

RUSHTON, A. W. A.
A new spiny species of Pseudoclimacograptus from the Ordovician of the Sanquhar area, Southern Uplands ............................................. 41

ZALASIEWICZ, J. & HOWE, M. P. A.
A case of profound astogenetic metamorphosis: the structure and affinities of Awarograptus nodifer (Törnquist, 1881) ..................................... 45

RIGBY, S.
The functional morphology and population structure of Rasnites maximus from the Southern Uplands .................................................. 51

RICKARDS, R. B. & WRIGHT, A. J.
The Pristiograptus dubius (Suess, 1851) species group and iterative evolution in the Mid- and Late Silurian ........................................ 61

CHOPEY-JONES, A., WILLIAMS, M. & ZALASIEWICZ, J.
Biostratigraphy, palaeobiogeography and morphology of the Llandovery (Silurian) graptolites Campograptus lobiferus (M'Coy) and Campograptus harpago (Törnquist) ........................................... 71

RUSHTON, A. W. A.
An addition to the graptolite fauna from the Superstes Mudstone Formation, Girvan District ................................................................. 87

ZALASIEWICZ, J., WILLIAMS, M. & AKHURST, M.
An unlikely evolutionary lineage: the Rhuddanian (Silurian, Llandovery) graptolites Huttagraptus? praeamaturus and Coronograptus cyphus re-examined ........................................... 89
