The *Scottish Journal of Geology* continues the *Transactions of the Edinburgh Geological Society* and the *Transactions of the Geological Society of Glasgow*, and is sponsored by the councils of the two societies. It contains two parts per volume. The *Journal* is sent to members of both societies. Details of membership may be obtained from the secretaries, whose names appear below.

Contributions or legacies to assist towards the cost of publication of the *Journal* would be welcomed by the Editorial Board.

**EDITORS**

COLIN BRAITHWAITE  
ROBERT CHEENEY  
ROB DUCK

ROB ELLAM  
EMRYS PHILLIPS  
SUE RIGBY

PHIL STONE  
ROY THOMPSON

**Front cover illustration**

The cover illustration shows flattened specimens of *Rastrites* and of a curved monograptid from the *taingulatus* Zone of the Birkhill Shales at Dob’s Linn. Dob’s Linn is the location of the Ordovician-Silurian Boundary Stratotype (the Golden Spike) and it was one of the main localities investigated by Lapworth for his monograph on the Moffat Series of 1878. A well-preserved fossil from this locality highlights the major contribution made through the study of graptolites to traditional geological disciplines, such as biostratigraphy, and to more recently developed areas such as the investigation of palaeoecology and regional tectonic evolution.
