

Notes to assist authors planning to submit items for publication in the *Scottish Journal of Geology*

Aim: The primary aim of the Journal is to publish papers relevant to the geology of Scotland and adjacent areas including the surrounding seas. Papers of general or specialist interest as well as short communications, letters to the editor, and discussions of earlier papers are welcome, together with reviews and thematic sets publishing the results of relevant meetings and conferences.

Submission: All contributions must be original. Papers, including figures and references should not normally exceed 12 printed pages. Typescripts should be sent to: The Editors, *Scottish Journal of Geology*, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath BA1 3JN. Joint authors should indicate to whom proofs and correspondence should be sent.

Format: One complete copy of the full manuscript should be submitted with a MS Word file on disk or CD. Text, figures, captions and tables should be in separate files. Typescripts should be double-spaced throughout (including references) on A4 paper, on one side of the paper only, with a 25mm margin on each side. All pages should be numbered serially.

Title: brief and specific. Name(s) and address(es) of author(s) (including an e-mail address for the corresponding author). Synopsis: must be intelligible without reference to the paper and should not exceed 200 words. Main body of paper, subdivided into 1st, 2nd, and 3rd order headings (see recent issue for styles). Acknowledgements. Appendices. References: NAME, A. B. Year. Title. [*In* Name, C. D. & Name E. F. (eds) *Title*. Publisher, place, pages] *Journal*, vol., pages. Tables. Captions for figures. Figures.

Text: Authors should ensure consistency in their use of capitals, hyphens and punctuation. Underlining should be used only to indicate words in italics, e.g. fossil names. Footnotes should be avoided. References in the text should be separated by a semicolon and appear in chronological order (Hutton 1795; Hutton & Smith 1805; Werner 1874). Reference in the text to papers with more than two authors should be made thus: (Smith *et al.* 1975) but cited in full in the reference list.

References: List all references cited in text, figures and tables. They should be double spaced, in alphabetical order of the authors' names with '*et al.*' entries listed chronologically. Repeated author names and journal titles should be given in full. Unpublished material and manuscripts submitted to a journal but not yet accepted should not be cited. Personal communications are preferable to inaccessible unpublished reports.

Figures: Page size is 252 x 176 mm; column width is 85mm. Figures should be prepared to fit either a page or column width leaving space for the caption. They must be

numbered consecutively and referred to in the text in that order. Make sure that scales and north arrows are included where appropriate. Please provide print outs that are exactly the same as the material on the disc. Acceptable graphics packages are Corel Draw, Adobe Illustrator and Aldus Freehand. Ensure that fine lines are saved as actual line widths of at least 0.5 pt. Do not use fine-line default settings (minimum width or hairline) or fine shading; on a high-resolution output device such as a film-setter they may be too fine to show up in print. This problem cannot be detected in proofs, which are produced with a laser printer. No letters, after reduction, should be less than 1mm high.

Figures should be supplied as EPS files with fonts embedded and a tiff preview. If EPS files are not an option, we can accept high resolution (1000 dpi) bit map TIFFs (or JPEG, GIF).

Photographs or halftones can be provided as EPS or greyscale TIFF files (recommended resolution of >300dpi). A scale bar should be used on photographs.

Colour may be used, but authors wishing to do so must contact the editors. Authors are expected to contribute towards the cost of colour reproduction. Similarly, folded figures are expensive, and editors must be consulted. Colour must be saved as CMYK (not RGB).

Tables: Tables should go across single or double column width. Vertical and horizontal rules should be avoided. Tables must be provided as Word, Excel or .rtf files.

Supplementary publication scheme: Detailed material such as locality lists and analytical data, will be made available as Supplementary Publications. These files are stored at the British Library and the Geological Society's library and are hosted on the Society's website. Acceptable formats for the online repository are: .rtf, .csv and .pdf. Maximum size is 5 MB per paper (can be zipped if necessary).

Offprints/pdfs: Offprint copies of papers will be provided at cost if ordered when the corrected proofs are returned to the publisher. Copies are normally distributed soon after publication. The journal is available online through ingentaconnect (www.ingentaconnect.com/journals/browse/geol/sjg). Authors will be sent instructions on how to obtain pdfs.

Copyright: The *Scottish Journal of Geology* is the joint property of the Geological Society of Glasgow and the Edinburgh Geological Society, in whom the copyright rests. Queries regarding copyright should be directed to the secretaries of the Societies. Papers accepted for publication are deemed to be the property of the Editorial Board acting on behalf of the Societies unless specific arrangements are made to the contrary.

More information, including contents of recent issues can be found on the Journal's WWW page:

Subjects

- aeolian deposition, Swanshaw Formation 161–177
An Scurr, fossil locality 21–27
Ardnamurchan Central Complex 83–85
Atlantic Margin, modelling hydrocarbons in 1–19
basalt, Paleocene of Lough Neagh Basin 101–112
Ben Vuirich Granite petrogenesis 113–136
biostratigraphy, graptolite 59–64
book reviews 87
Caledonian Orogeny
 Ben Vuirich Granite 113–136
 Gaick Fold Complex 149–159
 Ross of Mull Granite 179–189
Caledonides (Paratectonic), regional geochemistry 65–76
Canisp Porphyry, age of 77–81
conglomerate, dating boulders in 29–35
Corsewall Formation 29–35
Cretaceous, petroleum reservoirs 1–19
Dalradian Supergroup, metasediment origins 43–57
Devonian, Swanshaw Formation facies analysis 161–177
Dob's Linn, graptolite biostratigraphy 59–64
dolerites, Ardnamurchan Central Complex 83–85
dykes, Ross of Mull 37–41
Eden, River, sediment provenance 137–148
Eigg, Isle of 21–27
emplacement mechanisms, Ross of Mull Granite 179–189
facies analysis, Swanshaw Formation 161–177
Faroe–Shetland Basin, modelling hydrocarbons in 1–19
fjord landsystem, Summer Isles 89–99
fluid inclusion analysis 1–19
fluvial deposition, Swanshaw Formation 161–177
Foinaven Sub-basin, modelling hydrocarbons in 1–19
folding, Gaick Fold Complex 149–159
fossils
 graptolite biostratigraphy 59–64
 Paleocene wood 21–27
Gaick Fold Complex 149–159
Gala Group, geochemical analysis 65–76
geochemistry
 Ben Vuirich Granite 113–136
 Caledonian stream sediments 65–76
 Green Beds 43–57
geochronology *see* U–Pb dating
glaciation, Late Devensian 89–99
Grampian Event
 Ben Vuirich Granite setting 113–136
 Gaick Fold Complex 149–159
Grampian Highlands

- Ben Vuirich Granite setting 113–136
 Gaick Fold Complex 149–159
 granitoid, boulder dating 29–35
 graptolite biostratigraphy 59–64
 Green Beds, origins of 43–57
- Hawick Group, geochemical analysis 65–76
 heavy minerals, stream sediment analysis 65–76
 hydrocarbons, modelling generation 1–19
- intrusions, Ross of Mull Granite 179–189
- Jurassic, petroleum source rocks 1–19
- Lake District, regional geochemistry 65–76
 Lanark Basin, sedimentary environments 161–177
 Late Devonian, Summer Isles fjord landsystem 89–99
 lithosphere, information from xenoliths 37–41
 Lough Neagh Basin, Cenozoic tectonic setting 101–112
- magnetic properties, River Eden sediment 137–148
 magnetite characterization, River Eden sediment 137–148
 major element analysis, Ben Vuirich Granite 113–136
 migration in petroleum systems 1–19
 Moine Thrust Belt, age of 77–81
 monazite age, granitoid clast 29–35
 moraines, Summer Isles 89–99
 Mull *see* Ross of Mull Granite
- Neolagarograptus tenuis* 59–64
 net-vein dolerites, Ardnamurchan Central Complex 83–85
 Northern Ireland, Cenozoic tectonic setting 101–112
 Northwest Highlands, age of Moine Thrust Belt 77–81
- Oligocene, clays of Lough Neagh Basin 101–112
 Ordovician, conglomerate boulder dates 29–35
- Paleocene,
 basalts of Lough Neagh Basin 101–112
 fossil wood 21–27
- Permian, dykes in Ross of Mull 37–41
 petrogenesis, Ben Vuirich Granite 113–136
 petroleum systems, modelling 1–19
Polyactinoxylon subansgurrensis 21–27
 Precambrian, metasediment origins 43–57
 provenance studies, River Eden sediment 137–148
- recumbent folds, Gaick Fold Complex 149–159
- reservoirs, Paleocene 1–19
 Riccarton Group, geochemical analysis 65–76
 Ross Formation, geochemical analysis 65–76
 Ross of Mull Granite
 emplacement 179–189
 xenoliths in 37–41
- sedimentology, Green Beds 43–57
 seismic profiles, Summer Isles area 89–99
- Silurian
 graptolite biostratigraphy 59–64
 Swanshaw Formation facies analysis 161–177
- source rocks, Jurassic 1–19
 Southern Highland Group, metasediment origins 43–57
- Southern Uplands
 evolution of 29–35
 graptolite biostratigraphy 59–64
 regional geochemistry 65–76
- Stimulograptus sedgwickii* Zone 59–64
 stream sediments, geochemical analysis 65–76
 subglacial erosion, Summer Isles 89–99
 Summer Isles fjord landsystem 89–99
 Swanshaw Formation, facies analysis 161–177
- tectonics, Cenozoic of Northern Ireland 101–112
 The Minch ice stream 89–99
 titanomagnetite, River Eden sediment 137–148
- trace element analysis
 Ben Vuirich Granite 113–136
 Caledonian stream sediments 65–76
 geochemistry of Green Beds 43–57
- traps, Paleocene 1–19
- U–Pb dating
 Canisp Porphyry 77–81
 granitoid clast 29–35
- vitritine reflectance 1–19
 volcanism, Paleocene of Lough Neagh Basin 101–112
- Windermere Supergroup, geochemical analysis 65–76
 wood fossils 21–27
- xenoliths, Ross of Mull granite 37–41
- zircon age, Canisp Porphyry 77–81
